

Blockchain timestamping

Timestamp, certify and authenticate your digital files with Blockchain technology

- Protecting your intangible creations, timestamping your evidence of use / use is essential. In case of a dispute, it will be necessary to prove the seniority of your creations and to provide tangible proof to assert your rights.
- Our timestamping service makes use of the Tezos blockchain to create a certificate of your digital file integrity: documents, records, photographs, etc.
- This certificate attests to the existence and status of a file at a given time.

Certification of a digital file

- On our platform, you just need to drag and drop your digital file (text, photo, video, music, graphic design, etc.) to certify the same. You may write a description and add tags to the file to simplify the research.
- Once the certification has been made, a receipt will be directly available in PDF format in your Client area. It will allow you to prove the certification and timestamping of a file and allow your contacts to verify the same.
